EASTERN DISTRICT OF CALIFORNIA

J.M., an individual,) Case No. 2:24-cv-03384-KJM-JDP
Plaintiff,)
v.) Hon. Kimberly J. Mueller
RED ROOF FRANCHISING, LLC, et al.,)
Defendants.)
)
)
)
)
)

**|PROPOSED| STIPULATION REGARDING
DISCOVERY OF ESI**

1 The parties to the above-captioned Action (the “Parties,” and each, a “Party”) stipulate and
2 agree that the following specifications shall govern discovery of all physical documents,
3 electronically stored information, and any other materials and information, if any, produced by the
4 parties during discovery in the above-captioned action.

5 **I. DEFINITIONS**

6 The following definitions apply to this Order Regarding Discovery of Electronically Stored
7 Information (“ESI Order”):

8 1. “Action” means the above-captioned matter.

9 2. “Custodian” means the individual or originating source from which
10 Documents or ESI will be collected and reviewed.

11 3. “Document” and “Electronically Stored Information” (“ESI”) is defined
12 to be synonymous in meaning and equal in scope to the usage of the term “documents or
13 electronically stored information” in Federal Rule 34(a)(1)(A). A draft or non-identical copy is a
14 separate document within the meaning of this term.

15 4. “Native Format” means and refers to the file structure of a document
16 created by the original creating application (in contrast to a Static Image, which is a representation
17 of ESI produced by converting a native file into a standard image format capable of being viewed
18 and printed on standard computer systems, such as .tiff or .pdf).

19 5. “Metadata” means (i) information associated with or about a file that is not
20 ordinarily viewable or printable from the application that generated, edited, or modified such native
21 file which describes the characteristics, origins, or usage or validity of the electronic file; and (ii)
22 information generated automatically by the operation of a computer or other information technology
23 system when a native file is created, modified, transmitted, deleted, saved, or otherwise manipulated
24 by a user of such system.

25 6. “Load File” means an electronic file containing information identifying a
26 set of paper-scanned images or processed ESI and indicating where individual pages or files belong
27 together as documents, including attachments, and where each document begins and ends. A Load
28 File will also contain data relevant to the individual Documents, including extracted and user-

1 created Metadata, as well as OCR or Extracted Text, should such data be available.

2 7. “OCR” means optical character recognition technology which is created
3 by software used in conjunction with a scanner that is capable of reading text-based paper/hard copy
4 documents and making such documents searchable using appropriate software.

5 8. “Extracted Text” means the text extracted from a native document, and
6 includes all header, footer, and document body information, including any hidden content, when
7 available. A “Text File” is a file containing the full multi-page text of native or near-native files
8 extracted directly from the native file, or, in the case of paper/hard copy documents subject to OCR,
9 a file containing the text resulting from the OCR.

10 9. “Media” means an object or device, including but not limited to, a disc,
11 tape, computer, or other device, on which data is or was stored.

12 10. “Parties” collectively shall mean all named parties to any action in these
13 Proceedings, including any Party added or joined to any complaint in these Proceedings, as well as
14 named parties to actions that may be consolidated into or coordinated with the above-captioned
15 Action.

16 11. “Predictive Coding/Technology Assisted Review” shall mean processes
17 for prioritizing or coding a collection of documents using computerized systems, such as machine-
18 learning algorithms, that may rely on the judgments of one or more attorneys experienced in the
19 subject matter of a litigation regarding the responsiveness of a subset of documents and extrapolates
20 those judgments to the remaining document collection. For purposes of this Protocol, Predictive
21 Coding/Technology Assisted Review is synonymous with computer-assisted review, computer-
22 aided review, and content-based advanced analytics or other terms used to refer to search
23 methodologies that rely on machine-based learning to identify responsive documents.

24 12. “Production” or “Produced” includes any exchange of Documents or
25 Electronically Stored Information between the Parties, whether voluntarily or in response to a
26 formal or informal request.

27 13. “Search Term” means a combination of words (including synonyms) and
28 phrases designed to capture potentially relevant ESI, and includes strings of words and phrases

1 joined by proximity and Boolean connectors.

2 14. “Static Image” means or refers to a representation of ESI produced by
3 converting a native file into a standard image format capable of being viewed and printed on
4 standard computer systems. A Tagged Image File Format (TIFF) image is an example of a Static
5 Image. “TIFF” refers to the CCITT Group IV graphic file format for storing bit-mapped images of
6 ESI or paper Documents.

7 15. “Structured Data” means ESI stored in a structured format, such as
8 databases or data sets according to specific form and content rules as defined by each field of the
9 database.

10 16. “Unstructured Data” refers to free-form data which either does not have a
11 data structure or has a data structure not easily readable by a computer without the use of a specific
12 program designed to interpret the data, such as word processing documents, slide presentations,
13 Email, and image files.

14 **II. GENERAL**

15 A. The Parties shall take reasonable steps to comply with the procedures laid out in
16 this ESI Order. The Parties agree to promptly alert all other Parties concerning any technical
17 problems associated with complying with this ESI Order. If compliance with this ESI Order imposes
18 an undue burden with respect to any protocol, source, or search term listed herein, the Parties shall
19 promptly confer in good faith in an effort to resolve the issue.

20 B. The purpose of this Order is to facilitate the exchange of physical documents and
21 ESI in an efficient manner and in accordance with the Federal Rules of Civil Procedure (“Federal
22 Rules”). By stipulating to this Order and agreeing to produce documents, generally, in a particular
23 form or form, except as specifically set forth herein, this Order does not:

24 1. Alter or affect the applicability of the Federal Rules or any Local Rules of
25 the U.S. District Courts (“Local Rules”), as applicable;

26 2. Enlarge, reduce, or otherwise affect the scope of discovery in this litigation
27 as imposed by the Court’s orders;

28 3. Address, limit, determine, or affect the relevance, discoverability, or

1 admissibility as evidence of any document or ESI, regardless of whether the document or ESI is to
2 be preserved, is preserved, or is produced;

3 4. Imply that discovery produced under the terms of this ESI ORDER is
4 properly relevant, discoverable, or admissible in this or in any other litigation; or

5 5. Alter or affect the objections of discovery applicable under the Federal
6 Rules, and no Party waives any objections to producing any particular document or category of
7 documents on any grounds whatsoever.

8 C. If reasonably possible, the production of physical documents and ESI shall be
9 conducted to maximize efficient and quick access and minimize related discovery costs. The terms
10 of this ESI Order shall be construed to ensure the prompt, efficient, and cost-effective exchange of
11 information consistent with the Federal Rules, the Local Rules, and any orders that have been
12 entered by this Court in this case.

13 D. All documents that are produced in this Action shall be produced in the manner
14 provided herein, provided however, that the Parties may agree to other forms of production for all
15 or part of the documents produced. Nothing in this ESI Order shall be interpreted to require
16 disclosure of physical documents, ESI or other materials that a Party contends are not discoverable
17 or are protected from disclosure by the attorney-client privilege, the attorney work product doctrine,
18 or any other privilege that may be applicable. Additionally, nothing in this ESI Order shall be
19 deemed to waive or limit any Party's right to object to the production of certain physical documents
20 or ESI, or to move for an appropriate order on the ground that the sources are not reasonably
21 accessible because of undue burden or cost or on the ground that there is no good cause for the
22 documents/production. Nothing in this ESI Order shall be deemed to limit, modify, or override any
23 provision of the confidentiality order entered in this case to govern production of confidential
24 information.

25 **III. IDENTIFICATION OF RESPONSIVE ESI**

26 Consistent with their obligations under the applicable Federal Rules and Local Rules, the
27 Parties will attempt to resolve, in person, in writing (including email), or by telephone, disputes
28 regarding the issues set forth herein before filing a motion with the Court, or otherwise seeking

1 relief. If the Parties are unable to resolve the dispute after a good-faith effort, the Parties may seek
2 Court intervention in accordance with the Court's procedures.

3 **VI. PRODUCTION OF PHYSICAL DOCUMENTS AS STATIC IMAGES**

4 Documents that exist solely in physical hard-copy format shall be scanned and produced
5 in color where the original hard-copy document exists in color and shall also be scanned and
6 produced as either (a) single-page, Group IV, 300 DPI TIFF images or (b) single-page JPEG
7 images, with an Opticon image Load File using ANSI/Western European encoding ("OPT file")
8 and a delimited database Load File ("DAT file"). The DAT file should contain the fields listed in
9 Exhibit A. Hard copy documents should be physically unitized. The Parties reserve the right to
10 allocate costs of color scanning if it becomes burdensome, and any such requests are subject to
11 the boundaries of proportionality.

12 If the producing party performs optical character recognition ("OCR") on a document for
13 its own benefit, the document-level OCR text should be produced as an accompanying plain text
14 file named after the bates number in the "BEGNO" field of the DAT. To the extent OCR plain
15 text files are produced, the producing party is not certifying that the accompanying text file is
16 accurate or reliable for searching purposes beyond the application of the underlying OCR
17 technology.

18 **VII. PRODUCTION FORMAT FOR ESI**

19 **A. General:** All ESI should be produced as single-page, Group IV, 300 DPI TIFF in
20 black and white.

21 **B. Native Production:** Notwithstanding Section III.A., the following file types shall
22 be produced in native format unless they require redaction (i) audio, (ii) video, (iii) databases, (iv)
23 spreadsheet-type files (e.g. Microsoft Excel, Corel Quattro, *etc.*), (v), computer slide presentations,
24 including PowerPoint, Google Slides, Keynote slides *etc.*; (vi) JPEGs; and (vii) multimedia files
25 (e.g. GIFs, animations or combination of text, sound and/or motion video). All native files that
26 require redaction shall first be processed to show and reveal all color, comments, revision marks,
27 speaker notes, or other user-entered data which are visible in any view of the document in its native
28 application, all of which shall be evident in the generated TIFF image(s).

1 1. Documents produced in native format should be named according to the
2 Bates number assigned, with the confidentiality designation appended to the Bates numbers with a
3 hyphen. Native documents should be linked directly to their corresponding records in the DAT file
4 using the NATIVELINK field.

5 2. Single-page Bates-stamped TIFF image slip-sheets will be included for
6 each document produced in native format. The slip-sheets will display the Bates number of the
7 native file, the Confidentiality endorsement, and an endorsement stating "File Produced Natively." If
8 documents requested in native format require redactions, the parties should ensure that proper
9 formatting and usability are maintained. The requesting party will identify to the producing party
10 redacted documents whose formatting or usability has been unreasonably degraded, and the parties
11 will meet and confer to agree on reasonable modifications to the production format.

12 3. If a spreadsheet-type file must be redacted, and the image file exceeded 15
13 pages, only the first 15 pages of that spreadsheet need to be redacted and the remainder may be
14 slipsheeted with a TIFF image slip-sheet noting that "Additional Pages Exceeding Redaction
15 Threshold".

16 C. **Redactions:** As set forth in the Confidentiality Agreement, the Producing Party
17 may redact from any TIFF image, metadata field, or native file material that is protected from
18 disclosure by applicable privilege or immunity. The Producing Party shall identify redactions
19 clearly on the face of any TIFF image, either with "Redacted" or the redaction reason on the face of
20 the Document if space allows (e.g. Privilege, etc.).

21 D. **Technical Issues:** If a document which would otherwise be produced in TIFF
22 format cannot be imaged for technical reasons, it may also be produced in native format as described
23 above, in which case the slip-sheets will display the Bates number of the native file and an
24 endorsement stating "Document Unable To Be Imaged."

25 E. **Color:** Documents containing color need not be produced in color in the first
26 instance, provided that the Producing Party shall retain a copy of produced hard copy documents in
27 color. The Producing Party will honor reasonable requests for a color image of a document, if
28 production in color is necessary to understand the meaning or content of the document. The

1 Requesting Party may request production of such documents in color by providing (1) a list of the
2 Bates numbers of documents it requests to be produced in color format; and (2) an explanation of
3 the need for production in color format. The Producing Party shall not unreasonably deny such
4 requests. The Parties reserve the right to allocate costs of color productions if they become
5 burdensome, and any such requests are subject to the boundaries of proportionality.

6 F. **Metadata:** All ESI should be produced with a DAT file that contains the metadata
7 fields listed in **Schedule A** annexed hereto, to the extent captured at the time of the collection.

8 1. To the extent that metadata does not exist or is not reasonably accessible
9 or available for any documents produced, nothing in this ESI Order shall require any Party to create,
10 extract, capture, collect or produce such metadata.

11 2. An accompanying OPT file should also be provided for all TIFF images.
12 TIFF images should show any and all text and images which would be visible to the reader
13 using the native software that created the document. For example, TIFF images of email messages
14 should include the BCC line, and TIFF images of MS Word documents should show all tracked
15 changes and comments.

16 G. **Text Files:** For all ESI produced, an accompanying document level text file
17 containing either the Extracted Text or OCR text from the document should be produced. The file
18 path and file name of the plain text file should be included in the “TEXTLINK” field of the DAT
19 file.

20 H. **Parent-Child Relationships:** Due to the contextual relationship of ESI, the
21 Parties will maintain family relationships for electronic data. The Parties agree that if any part of a
22 document or its attachments is responsive, the entire document and attachments must be produced,
23 except any attachments that must be withheld or redacted on the basis of any privilege or work-
24 product or other protection. However, in an effort to avoid unnecessary expense and burden, the
25 Parties agree that completely non-responsive documents attached to a responsive document may be
26 produced as a single-page Bates-stamped TIFF image slip-sheet stating the document has been
27 withheld as non-responsive and slip sheet metadata produced as identified in Schedule A. When
28 producing responsive attachments, the parent email will be produced, regardless of responsiveness

unless otherwise protected from disclosure. Each document shall be produced with the production number for the first and last page of that document in the “BegBates” and “EndBates” fields of the data Load File and with the “BegAttach” and “EndAttach” fields listing the production number for the first and last page in the document family.

VIII. PRODUCTION FORMAT FOR STRUCTURED DATA

To the extent a response to a non-objectionable discovery request requires production of discoverable electronic information contained in a database, the parties will meet and confer to address the most appropriate and cost-effective production format for the production and production format of any responsive data contained in a database or other structured or aggregated data source or otherwise maintained by an application, which may include running a report or a database export. The Parties will reasonably cooperate in the exchange of information concerning such databases to facilitate discussions on productions and production format. If the Parties cannot reach agreement, the requesting party will make a motion to compel the information.

IX. PRODUCTION FORMAT FOR MEDIA

Documents shall be exchanged on DVD-ROMs, CD-ROMs, USB drives, portable hard drives or through secure file transfer protocols (*e.g.*, FTP) or similar secure electronic transmission. The production media shall be labeled with the Volume Number along with the Bates Number range(s) of the materials, date of delivery, and where not practicable to do so, may be provided in an accompanying letter. If a hard drive contains multiple volumes, each volume should be contained in an appropriately named folder at the root of the drive. Volumes should be numbered consecutively (ABC001, ABC002, etc.). Any document production that may contain material subject to the Protective Order shall be produced in encrypted form and the production media shall be labeled accordingly. If a Producing Party encrypts or “locks” the production, the Producing Party shall send, under separate cover, an explanation of how to decrypt the production.

X. PROCESSING SPECIFICATIONS

A. **Time Zone:** All provided metadata pertaining to dates and times will be standardized to Eastern Time.

B. **Global or Horizontal Deduplication:** All Parties shall make reasonable efforts

1 to de-duplicate ESI. ESI produced shall be globally de-duplicated across all collected custodial and
2 non-custodial sources. Removal of duplicate documents should only be done on exact duplicate
3 documents (based on MD5 or SHA-1 hash values, at the family level). Attachments should not be
4 eliminated as duplicates for purposes of production, unless the parent email and all attachments are
5 also duplicates. An email that includes content in the BCC or other blind copy field should not be
6 treated as a duplicate of an email that does not include content in those fields, even if all remaining
7 content in the email is identical. The initial custodian of a document should be listed in both the
8 CUSTODIAN and ALL CUSTODIAN fields and subsequent custodians' deduplicated copies of the
9 document should be listed in the ALL CUSTODIANS field, with each custodian name separated
10 by a semicolon.

11 C. **Email Thread Suppression:** The parties must meet and confer on the best
12 practices and technology to be used to identify most inclusive emails and unique attachments
13 associated with an email thread. If email thread suppression is utilized, the Producing Party may—
14 but is not required to produce any lesser inclusive emails and any identical attachments associated
15 with an email.

16 E. **System Files:** Each Party will “de-NIST” system and application files, unless they
17 are determined by the producing party to be responsive.

18 **XI. BATES NUMBERS**

19 Bates numbering should be consistent across the production, contain no special characters,
20 and be numerically sequential within a given document. If a Bates number or set of Bates numbers
21 is skipped, the skipped number or set of numbers should be noted with a placeholder. Attachments
22 to documents will be assigned Bates numbers that directly follow the Bates numbers on the
23 documents to which they were attached. In addition, wherever possible, each *.tiff image will
24 have its assigned Bates number electronically “burned” onto the image.

25 **XII. IDENTIFICATION AND COLLECTION OF DOCUMENTS**

26 Except as otherwise agreed upon in this ESI Order, the Parties will meet and confer
27 periodically regarding the scope of discovery, prioritizing collection and production efforts,
28 methods of ESI collection, including agreements on (i) custodians and business records, (ii) data

1 sources, including joint data sources managed or accessed by multiple employees, (iii) search
2 terms, (iv) email addresses or domains, and (v) date restrictions by matter or custodian, and
3 memorialize in writing any agreements reached. As part of these discussions, Counsel for the
4 respective Defendants will disclose to Plaintiffs the Custodians most likely to possess responsive
5 ESI and hard copy documents.

6 **XIII. REVIEW POPULATION OF POTENTIALLY RESPONSIVE DOCUMENTS**

7 The Parties acknowledge the potential benefits of using technology-assisted review
8 (“TAR”) technology and methodology in assisting in the identification of responsive documents,
9 whether used in combination with search terms or otherwise. Used properly, subject to negotiation,
10 an appropriate and reasonable TAR protocol can be one aid in identifying responsive documents.

11 The Parties will negotiate and discuss the proper procedures to use in this matter, including
12 TAR, search terms, and other measures, to identify a proportionate and reasonable number of
13 potentially responsive documents in connection with Defendants’ production. The Parties will
14 jointly agree to the methods and systems that they propose to use to identify potentially responsive
15 documents for this matter, and agree to meet and confer after collection of the ESI and physical
16 documents in this case.

17 **XIV. EXCLUDED FILE TYPES**

18 Absent a particularized need and good cause showing, the circumstances of this case do
19 not warrant the preservation, collection, review, or production of ESI from the sources noted below
20 because they are either not reasonably accessible or it is anticipated that enough relevant
21 information can be yielded from accessible sources and, as necessary and appropriate,
22 supplemented with deposition discovery. The following ESI does not require preservation,
23 collection, review or production:

24 1. Deleted, shadowed, damaged, residual, slack, fragmented, or other data
25 only accessible by specialized computer forensics tools and methods.

26 2. Random access memory (RAM), temporary files, or other ephemeral data
27 that is difficult to preserve without disabling the operating system.

28 3. Online access data such as temporary Internet files, history, cache, cookies

1 and the like.

2 4. Data stored on photocopiers, scanners, and fax machines.

3 5. Data in metadata fields that are frequently updated automatically, such as
4 last accessed dates, last printed dates, and last saved dates, so long as at the time the data is collected
5 for inclusion on Schedule "A" nothing is done to scrub, remove or alter in any way the data from
6 the native files.

7 6. Back-up data that are substantially duplicative of data that are more
8 accessible elsewhere

9 7. Server, system, or network logs.

10 8. Data remaining from systems no longer in use that is unintelligible on the
11 systems in use.

12 9. Email, calendars, and contact data sent to or from mobile devices (e.g.,
13 iPhone, iPad, Android, and Blackberry devices) that are duplicative of data that are more accessible
14 elsewhere.

15 Nothing herein shall prevent a Party from subsequently requesting that ESI or other
16 Documents identified above be preserved and produced if specific facts demonstrate a particular
17 need for such evidence that justifies the burden of preservation and retrieval.

18 **XV. PRIVILEGE AND PRIVILEGE LOGS**

19 A. **Privilege Log:** A Party that withholds documents, ESI, and any other materials and
20 information on the grounds of attorney-client privilege, attorney work product, and/or any other
21 applicable privilege, immunity or protection from discovery, shall produce a privilege log. The
22 privilege log shall list the specific privilege or privileges asserted regarding each withheld document
23 and describe the document with sufficient particularity to allow the receiving Party to assess the
24 claim of privilege but without revealing privileged information. The privilege log shall, to the extent
25 available, include the date the document was prepared, the person or persons who prepared the
26 document, and the person or persons to whom the document was addressed, directly and by carbon
27 copy or blind copy. The privilege log shall indicate whether any identified sender or recipient of
28 the document was acting in the capacity of attorney for the Party. The privilege log shall include the

1 subject and or title of the document without revealing privileged or protected information.

2 **1. Materials Not Required to be Logged.** The following documents
3 presumptively need not be included on a privilege log:

4 (a) Privileged communications exclusively between a Party and its
5 counsel and/or staff or agents of counsel related to representation in this case where no other party or
6 third party is also included in the communication.

7 (b) Privileged communications exclusively involving outside counsel,
8 where no Parties to this action or any third party is included, copied, or blind-copied.

9 (c) Work product created by in-house or outside counsel, or by an agent
10 of in-house or undersigned counsel for this litigation.

11 (d) Non-substantive embedded files in privileged documents (*i.e.*,
12 images, logos, *et cetera*).

13 **2. Logging Email Threads.** For purposes of creation of a privilege log, a
14 Party need include only one entry on the log to identify withheld privileged emails that constitute
15 an uninterrupted dialogue between or among individuals; provided, however, that disclosure must
16 be made that the emails are part of an uninterrupted privileged dialogue. Moreover, the beginning
17 and ending dates and times (as noted on the emails) of the dialogue and the number of emails within
18 the dialogue must be disclosed, in addition to other requisite privilege log disclosure referenced
19 above, including the names of all of the recipients of the communications.

20 **3. Time for Serving Privilege Log.** Privilege logs shall be produced in
21 accordance with the Federal Rules of Civil Procedure and any applicable local rules and procedures.

22 **B. Reservation on Privilege Logs.** The Parties reserve their rights to revisit the date
23 after which documents need not be included on a privilege log and may modify the agreed upon
24 date(s) by mutual agreement. The Parties further agree to meet-and-confer regarding any proposed
25 additional categories of documents that presumptively need not be logged.

26 **XVI. PRODUCTION OF PRIVILEGED OR OTHERWISE PROTECTED
27 MATERIAL**

28 The inadvertent production of ESI protected by any privilege, right, immunity, or protection,

1 including without limitation the attorney-client privilege and the attorney work-product doctrine, shall
2 be governed by any Protective Order entered in this case. For clarity and avoidance of doubt, pursuant
3 to Federal Rule of Evidence 502(d), the inadvertent production of a privileged or work product
4 protected ESI is not a waiver in the pending case or in any other federal or state proceeding.
5 Moreover, the mere production of ESI in a litigation as part of a mass production shall not itself
6 constitute a waiver for any purpose.

7 Nothing contained in this ESI Order is intended to or shall serve to limit a Party's right to
8 conduct a review of documents, ESI or information (including metadata) for relevance,
9 responsiveness and/or segregation of privileged and/or protected information before production.

10 **XVII. THIRD PARTY DOCUMENTS**

11 A Party that issues a non-Party subpoena ("Issuing Party") shall include a copy of this ESI
12 Order with the subpoena and state that the Parties to the litigation have requested that third Parties
13 produce documents in accordance with the specifications set forth herein. Nothing in this ESI
14 Order is intended or may be interpreted to narrow, expand, or otherwise affect the rights of the
15 Parties or third Parties to object to a subpoena.

16 **XVIII. GOOD FAITH**

17 A. The Parties shall make their best efforts to comply with and resolve any differences
18 concerning compliance with this ESI Order . If a Producing Party cannot comply with any material
19 aspect of this ESI Order, such Party shall inform the Requesting Party as to why compliance with
20 the ESI Order was unreasonable or not possible within 15 days after so learning. No Party may
21 seek relief from the Court concerning compliance with the ESI Order unless it has conferred with
22 other affected Parties to the action.

23 B. Parties agree to identify the documents by including the Bates number of the first
24 page of the document at issue so long as the document was produced by the parties in this litigation
25 through discovery obtained in this litigation. Nothing in this paragraph is meant to preclude the
26 parties from otherwise using documents which were not necessarily produced as a result of
27 discovery in this litigation.
